Project

» Smart Patrol

Smart Patrol application is an Android-based mobile application that serves as a tool to maximize patrol activities using a "smartphone" to increase the effectiveness of real-time and organized management of places/environments. This application contains reports on patrols, activities, and incidents. The application has three roles: chief, guard, and client. Each role has its own features.

» Collateral Visit

Creating a collateral visit application that is used by verifiers to check and provide information related to the condition of collateral, evaluate the physical condition of the collateral being proposed. Then, input information related to the collateral through the "Covis" application which includes information about the collateral, its condition, and images of the collateral.

» Paris Ess Mobile

Paris Ess Mobile (Employee Self-Service) application is a tool used by companies or organizations to facilitate employees in accessing and utilizing information related to personal data, salary, and other benefits. This application provides employees with online access to this information through a secure and easy-to-use mobile application. With Paris ESS Mobile, employees can access important information about their job from anywhere and at any time, without needing assistance from HR or finance departments. They can update their personal information such as address and phone number. In addition, ESS also allows employees to view their salary history in real-time.
